

A scatter plot showing the relationship between Life Expectancy (x-axis) and another variable (y-axis). The x-axis is labeled 'Life Expectancy' and ranges from approximately 55 to 85, with major ticks at 60, 70, and 80. The y-axis ranges from approximately 10 to 90, with major ticks at 20, 40, 60, and 80. A blue regression line shows a negative correlation. A red circle highlights a data point at approximately (78, 15), with a blue arrow pointing up to a red square marker on the regression line at the same x-value.
